EDUCATION

DA-IICT (Dhirubhai Ambani Institute of ICT)
B.Tech in Information and Communication Technology (ICT)

Gandhinagar, India
October 2021 – May 2025

TECHNICAL SKILLS

- **Languages & Databases:** Java, C++, Go, PL/SQL, PostgreSQL, DynamoDB, Cassandra, Redis
- **Core Competencies:** Distributed and Scalable Systems, Artificial Intelligence (AI), OOP (Object-Oriented Programming), RAG, Microservices, LLM
- **Frameworks & Libraries:** Spring Boot, React, JPA/Hibernate, Mockito
- **Tools & Infrastructure:** Git, Docker, Kubernetes, Terraform, CI/CD, Kafka, Spring AI, LangChain4j, ADKs, Pinecone, LLM APIs (OpenAI, Anthropic Claude, Groq), AWS

PROFESSIONAL EXPERIENCE

Barclays

Pune, India

Software Engineer (Full-Time)

Aug. 2025 – Present

- **Engineered enhancements** across 5 backend **Microservices (Java/Spring Boot)**, utilizing robust **System Design** to build scalable components supporting **100,000+** daily transactions.
- **Streamlined deployments** by integrating automated **CI/CD** pipelines, **Kubernetes** orchestration, and AWS provisioning via **Terraform**, significantly reducing manual configuration overhead.
- **Optimized data processing** utilizing **SQL** within PostgreSQL, streamlining payload transformations and reducing average request latency by **15%**.
- **Led Root Cause Analysis (RCA)** and rigorous debugging for production incidents, maintaining **99.9%** uptime and reducing MTTR by **30%** through advanced APM log analysis.
- **Collaborated** in an **Agile/Scrum** environment to gather scope constraints, estimate work, and implement reliable data representation reports.

Barclays

Pune, India

Software Engineering Intern

May 2024 – July 2024

- **Developed** automated data ingestion pipelines to parse, process, and publish over **100,000** records utilizing **SQL** and message queues to eliminate manual processing bottlenecks.
- **Executed Unit Testing** via **Mockito** and performed component debugging during legacy system decoupling, accelerating API response times by **20%** while ensuring data integrity.
- **Participated** in technical design discussions to plan and execute tasks aimed at improving the team's operational development ecosystem.

PROJECTS

DocQA: Retrieval-Augmented Generation Engine | *Java 21, Spring Boot, Spring AI, Ollama*

- **Engineered** a local **RAG** ingestion pipeline using **Spring AI** and **Ollama**, leveraging Apache Tika and TokenTextSplitter to chunk documents into a **Vector Store** for context-aware LLM querying.
- **Implemented** a real-time streaming architecture via **Server-Sent Events (SSE)**, drastically reducing perceived latency for users interacting through the Thymeleaf UI.

hraftd: Distributed Key-Value Store | *Go, HashiCorp Raft, BoltDB, HTTP API*

- **Architected** a fault-tolerant, distributed key-value store in **Go** utilizing the **HashiCorp Raft** consensus algorithm for strict leader election and replicated state machine log replication.
- **Engineered** persistent log storage using **BoltDB** with automated snapshotting, and exposed a RESTful HTTP API for dynamic node clustering, telemetry, and consistent state mutations.

High-Performance HTTP Proxy & Load Balancer | *C++17, POSIX/Winsock2, Multithreading*

- **Architected** a multithreaded Layer-7 HTTP reverse proxy from scratch in **C++17**, utilizing non-blocking I/O polling and a custom thread pool for high-throughput request handling.
- **Engineered** dynamic routing algorithms (Round-Robin, Least Connections) and automated TCP health checks, optimizing socket lifecycles via RAII to guarantee memory safety under high concurrency.
